

Dr. Mark Brittingham, President  
BSDI  
6 Kellie Street  
Califon, NJ 07830

To Whom It May Concern:

HP Security Labs was retained by BSDI as an independent third party to perform a vulnerability assessment of its "Motivation" web application.

During this assessment, HP security consultants conducted several types of tests to assess the security of the Web application. These tests included the following:

- Parameter Manipulation
  - Cross-Site Scripting
  - SQL Injection
  - Reverse Directory Transversal
  - Buffer Overflow
  - Hidden Fields Manipulation
- Known Vulnerability Checks
- Common File Checks
- Data Extension Checking
- Path Truncation
- Hidden Web Paths
- Web Server Testing
- Application Mapping
- Directory Enumeration
- Backup Checking

Our assessment findings and subsequent verification reinforce the fact that BSDI consistently works to deploy effective measures to secure its "Motivation" web application; no significant vulnerabilities were found during our assessment.

HP Security Labs assessment findings were based upon information provided by BSDI and the configuration of its servers and networks at the time of the assessment. We used technologies and methodologies that we believe to be appropriate and reliable in assessing the security issues presented. We cannot, however, make representations or warranties concerning either those technologies or methodologies.

Sincerely,

A handwritten signature in black ink that reads 'Justin Warren'.
